

The bigger  
the number the more  
factor pairs it has.

Level  
**2**

Use examples to show that Dexter is wrong.

Rosie is investigating factor pairs.

Level  
**3**

6 is a perfect number  
because when you add its  
factors together, apart from  
itself, they equal 6

What is the next perfect number after 6?

The bigger  
the number the more  
factor pairs it has.
